#### **Heat Protection Filters**

Materion Balzers Optics family of Calflex<sup>™</sup> heat protection filters effectively remove damaging radiation from optical systems using broadband light sources. These filters combine extremely high transmission in the visible and a sharp transition to reflection in the IR. Several types of Calflex<sup>™</sup> are available to balance cost versus performance. The products differ primarily in their IR-blocking range.

- Calflex<sup>™</sup> 3000 SP and B1/K1: blocking range NIR + IR
- Calflex<sup>™</sup> C and X SP: blocking range NIR

#### **Benefits**

- Heat rejection independent of glass thickness
- High visible transmission
- No color degradation
- Hard, chemically and mechanically stable dielectric oxide coating

#### **Applications**

- Projection systems
- Automotive headlights
- Copiers and film readers
- Medical lighting
- Product showcase lighting
- Fiber optics
- Museum lighting
- Imaging detectors
- Photodiode receivers

#### **Technical Data Overview**
