

# Additive and Subtractive Color Filters

## High Performance Dichroic Color Filters

Dichroic additive and subtractive color filters are dielectric interference filters which transmit certain regions of the visible spectrum and reflect others with a high degree of efficiency. Compared to color glass or gelatine filters, dichroic filters are virtually absorption free, highly transmitting and with optimum color saturation. Filters are mechanically and chemically resistant without fading and aging.

### Benefits

- Sharp spectral separation between transmission and reflection with high transmission and reflection values
- Very high color purity
- Ultimate color saturation
- High brightness
- Accurate and reproducible colors
- High temperature resistance
- Filter characteristics independent of glass thickness
- Robust, easy to clean

### Applications

- Optical sensors
- Readers, Barcode scanners
- Color printers, color enlargers
- Optical measuring instruments, Spectroscopy
- High End luminaires
- Entertainment lighting
- Color TV cameras
- Fotofinishing
- Dental Polymerisation
- Signalisation

### Technical Data

#### Colors

3 additive and 3 subtractive colors  
(customized colors on request)

#### Angles of incidence

0°

#### Substrate material

Heat resistant borosilicate glass

#### Temperature stability

up to 300 °C

#### Standard dimension

160 · 110 · 1.1 mm
